

## Interior Design Service for New Builds & Renovations

### **The Brief**

In person consultation going over the project functions, your wants and needs and revision of project plans and inspiration material to establish the interior design brief. From this I can develop the interior design brief and provide you with a digital mood board and written brief.

### **Finishes Selections**

About a 2-3 hour face to face meeting with product samples I've curated based on the interior design brief to select finishes such as wall coverings, colours, tiles and flooring. I will then provide you with a digital material board and finishes schedule including product information, project applications, product images, estimates where available, and supplier details.

### **Product Selection Guide**

A researched and assembled list of recommended fittings and fixtures for you to select from. This will include at 2-3 options for each item, product information, project applications, product images, costs and supplier information to assist with your selection.

Product selections include door hardware throughout, bathroom fixtures & fittings, cabinetry fittings and hardware, light fittings & accessories, window treatments, appliances and built-in furniture.

Supplier showroom/site visits are often required for this stage.

### **Furniture Selection Guide**

A researched and assembled list of recommended furnishings for the project. Included in the researched and assembled list will be at least 2 options per item, furniture images, costs, supplier details, lead times and project applications to assist you with your selections and ordering.

### **3D Rendered Images**

Use of 3D modelling software to create a photo-realistic perspective of your space with accurate materials, colours, finishes and furnishings applied to show you the intended composition of your selections within the space.
